## CONSUMER INCOME

August 28, 1962

Washington 25, D.C.

Series P-60, No. 38

### AVERAGE FAMILY INCOME INCREASES IN 1961

(Advance data from March 1962 sample survey)

The average (median) money income of families in the United States was about \$5,700 in 1961, according to estimates released today by the Bureau of the Census, Department of Commerce. This estimate, from a sample survey of some 26,000 households, was about \$120, or 2 percent, higher than in 1960. Consumer prices rose during this period by about 1 percent; therefore, any increase in family income greater than this amount represented a net gain in purchasing power for the average family.<sup>1</sup>

About 10 million families, or 21 percent of the 46½ million families in the Nation, received money incomes under \$3,000 in 1961. The number of families in that income range remained about the same as a year earlier. Another 9 million, or 20 percent, received incomes between \$3,000 and \$5,000 last year; and 10 million, or 22 percent, had incomes between \$5,000 and \$7,000. The remaining 17 million families, or 37 percent, reported incomes of \$7,000 or more, representing an increase of about 1½ million families in this class since the March 1961 survey.

Table A.—NUMBER OF FAMILIES BY 1961 FAMILY INCOME, FOR THE UNITED STATES

Family income	Number of families
Total.....	46,341,000
Under \$1,000.....	2,316,000
\$1,000 to \$1,999.....	3,573,000
\$2,000 to \$2,999.....	4,037,000
\$3,000 to \$3,999.....	4,387,000
\$4,000 to \$4,999.....	4,845,000
\$5,000 to \$5,999.....	5,439,000
\$6,000 to \$6,999.....	4,714,000
\$7,000 to \$7,999.....	4,231,000
\$8,000 to \$9,999.....	5,375,000
\$10,000 to \$14,999.....	5,219,000
\$15,000 and over.....	2,205,000

For men, last year's median income advanced to \$4,200, up \$110, or 3 percent, from the preceding year. At \$1,300, the median income of women in 1961 remained substantially the same as in 1960 and 1959.

<sup>1</sup> The Consumer Price Index of the Department of Labor averaged 103.1 in 1960 and 104.2 in 1961 (1957-59=100).

The 1961 income statistics presented in this report were obtained from the Bureau's Current Population Survey of March 1962. More detailed income data from the survey for families and persons will appear in a report to be issued later this year. Income statistics collected in the 1960 Census of Population appear in a number of published reports. Basic distributions of persons 14 years old and over, families, and unrelated individuals, by money income in 1959, for the United States, each of the 50 States, the District of Columbia, and Puerto Rico are presented in *U.S. Census of Population: 1960, "General Social and Economic Characteristics," Series PC(1)-1C to 53C*. Statistics on income in 1959 by detailed characteristics, including cross-classifications by age, weeks worked, education, type of family, etc., are presented in Series PC(1)-D Reports entitled "Detailed Characteristics" for some or all of the following areas: States and their urban and rural parts, large counties, and standard metropolitan statistical areas of 250,000 or more.

The information on income in 1961 was collected from the civilian noninstitutional population and members of the Armed Forces living off post or with their families on post in the United States. Income data cover money income only, prior to deductions for taxes. The fact that many farm workers do not pay rent for their living quarters and that many receive an important part of their income in the form of goods produced and consumed on the farm rather than in money should be taken into consideration in comparing the income of farm and nonfarm residents.

Total income is defined as the sum of money wage or salary income, net income from self-employment, and income other than earnings, such as net rents, interest, dividends, Social Security benefits, pensions, and public assistance or other governmental payments. Family income represents the combined total received from these sources by all family members during the calendar year. Earnings are defined as the sum of money wage or salary income and net income from self-employment. A year-round full-time worker is one who worked primarily at full-time jobs (35 hours or more per week) for 50 weeks or more during 1961.

The median income is the amount which divides an income distribution into two equal groups, one group having incomes

above the median and the other having incomes below the median. In comparing income data for 1961 with those for previous years, account should be taken of the fact that changes in income were accompanied by changes in prices. Therefore, an increase or decrease in income between selected years does not necessarily represent a similar change in economic well-being.

Other data relating to the income received by the population are available from the personal income series of the Department of Commerce, the Department of Agriculture's farm income series, Federal individual income tax tabulations, and Old-Age and Survivors Insurance earnings records. These sets of statistics are collected for different purposes and differ with respect to coverage and definitions.

For a discussion of the comparability of these statistics with survey data collected by the Bureau of the Census, and for more detailed definitions of the terms and concepts used in this report, see Current Population Reports, Series P-60, No. 37, "Income of Families and Persons in the United States: 1960."

Since the estimates in this report are based on a sample, they are subject to sampling variability. Particular care should be exercised in interpreting medians and percents based on relatively small numbers of cases, as well as small differences between figures. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting.
